About Me

I am a Fullstack developer with a strong passion for building modern, scalable, and user-centric web applications. I thrive on working across both frontend and backend, turning ideas into functional products with clean and maintainable code. With a solid understanding of web architecture, RESTful APIs, UI/UX principles, and database design, I aim to create seamless and efficient digital experiences. I enjoy collaborating with cross-functional teams, continuously learning new technologies, and writing code that not only works but is reliable, readable, and built to last.

Education

Fazztrack Bootcamp Feb 2023 – Sep 2023
Certificate Program

- **Coursework:** Web development fundamentals, Software Development Lifecycle (SDLC), REST API design, JavaScript (ES6+), React.js, Next.js, Express.js, Sequelize, Git & GitHub, team collaboration

SMK Ma'arif Nu 1 Ajibarang May 2018 – May 2021
High School Degree (Vocational Computer and Network Engineering)

- **Coursework:** Computer assembly, OS installation (Windows & Linux), network configuration (LAN/Wi-Fi), server administration, basic network security, virtualization

Experience

Fullstack Developer Jakarta, Indonesia
PT Evolusi Sistem Digital Okt 2024 - Present

- Built a custom ERP system using Ant Design framework, including modules for recruitment, HRD, general affairs (GA), and finance
- Developed a smart parking dashboard to monitor real-time vehicle activity, display availability, and provide entry/exit logs
- Created a responsive company website for a web hosting provider, showcasing hosting packages, client testimonials, and contact forms

Fullstack Developer Jakarta, Indonesia
PT Radar Utama Nusantara Lapan Sep 2023 - April 2024

- Developed a responsive company profile website to showcase business information, services, and contact channels, using modern UI principles and SEO best practices
- Designed and implemented a Human Resource Information System (HRIS) for employee data management, leave tracking, attendance, and payroll features
- Developed RESTful APIs for frontend-backend communication using Express.js and Sequelize

Projects

HJOBS ERP

- A custom-built Enterprise Resource Planning (ERP) system developed using the Ant Design framework, designed to streamline and centralize core business operations.
- Technologies : Ant Design, Vite, Microfrontend, Rabbit MQ, Docker, Kubernetes

Lookit HRIS

- A custom Human Resource Information System (HRIS) designed to streamline employee management, improve administrative efficiency, and centralize HR data
- Technologies : Next.js, Express.js, Sequelize ORM, PostgreSQL

Mitracloudhost Hosting Provider

- A custom-built parking management dashboard designed to monitor vehicle activity and optimize parking operations. The system provides real-time entry and exit tracking, vehicle duration monitoring, and space availability status.
- Technologies : Next.js, Express.js, Sequelize ORM, PostgreSQL

Technologies

Languages: Javascript, Typescript

Frameworks: React.js, Next.js, Node.js, Express.js,

Databases: PostgreSQL, MySQL, SQLite

Developer Tools: Git, Docker, AWS, Azure, GCP, RabbitMQ, Postman API, VS Code
